

10. Start turning the lower roller with the four handle wheel and push with the other hand lightly the printing plate and the printing block between the rollers.

11. The printing plate and the printing block must move itself when all comes between lower and upper roller. If not help a little by hand while giving more or less pressure on the upper roller by the star shaped handle.

12. For good a result it could be necessary to do some print proofs while adjusting the upper roller at the optimal point.

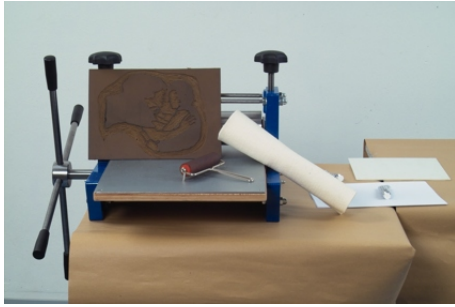

13. Once adjusted perfectly you can do several prints of one printing plate in a short time.

Printing Presses with rollers and printing table are especially designed for making many constant prints of one printing plate. This needs a good preparation of your work. Please take enough time for this preparation. The pictures will show you step by step how to prepare the press and your printing table with the printing block on it before you can start with doing many constant prints of one printing plate.

1 : Prepare everything you need for printing.

2: You need: Printing plate; Colour; Printing Paper; Ink; Ink Roller; some old paper to protect press table from getting dirty; etc.

3: For adjusting the press prepare the printing block but not coloured. (protecting paper, printing plate, printing paper, protecting paper, felt etc.)

4: Adjust the upper roller with the star shaped handles. Open the upper roller as much as you need to bring between the rollers the prepared printing block on the printing table.

5: Make sure that the slot is parallel. Do not turn only one handle it needs to turn both handles even. Otherwise there is a risk of canting and the pressure is not allocated even.

6: Do a test print with no colour. The pressure must be adjusted by the star shaped handles so that the printing table moves between the rollers by pushing lightly by hand the printing table.

7. Now colour the printing plate.

8. Put your paper on it and prepare as you did before without colour.

9. Put the printing table and the printing plate (coloured plate, printing paper, felt etc.) in the press.
